

Designed for future - available today

Technology for today's hotel challenges

Powerful and Easy to Use

mycloud is designed to simplify daily operations

Looking for a hospitality solution that will help you efficiently manage your hospitality business to generate better revenue? Gives you control over your finances? Reduce threats such as revenue loss and fraud?

Why mycloud?

Our service success over the past decade is evidenced by the support of properties across thirty-five countries across globe where Prologic First systems are accessed by thousands of users through Far East, India, Africa, America, Europe, Middle East and UK. Our skilled team provides a full-service product experience that seamlessly integrates consulting, implementation, training and support.

We have taken care to nurture and build a service signature that has become synonymous with our product brand name and is an integral factor that sets us apart from others.

Our hotel management solutions connect your hospitality-specific strategy and plans to your front- and back-office systems so you can make better decisions and more money. From hotel property management software to food and beverage management software, e-distribution & commerce, and more, you'll get the tools you need to manage availability, rates, reservations, guest profiles, and in-house services.

Join today mycloud software, which is developed by hospitality technology experts who have more than 30 years of experience in hospitality.

“We were pleasantly surprised when we subscribed to mycloudPMS, we moved from an an obsolete system (older PMS) to an **ever evolving system**. I am able to attract new business and at same time able to engage better with channels, because of **accurate forecasts**, system has helped us **improve and better manage guest expectations** and experience.

We especially like the **enhanced security and control** that it offers, allowing authorized users to access software from anywhere and on any device hence we can easily access all its over 100 operational and admin reports even while traveling.”

Moses Barnabas
General Manager - Xva Art Hotel Dubai

Connecting your entire organization

Unify your work

Define and increase satisfaction

Track and streamline operations

Improve staff efficiency

Optimize relationships

Yield stronger profits

Improve revenues

Enterprise Solution

mycloud is an fully integrated suite of enterprise software solutions consisting of modules that can be easily added or expanded allowing effective and easy deployment from smaller independent single and multi-property operations to global, multi-branded hotel chain environments.

A comprehensive Front Office service

Cloud based hotel software which includes all the IT functions required by guest facing staff and managers in a hotel. This includes sales, rooms division, food & beverage and city ledger. Industry standard interfaces are available to interface mycloud PMS with 3rd party systems and products.

More modules are being added in the mycloud family to make mycloud the most comprehensive hotel software service platform available.

Easy Set-up & Operations

mycloud does not need any installation.

User can easily setup whole solution within minutes by following a witty wizard. Also, the system's easy-to-use graphical interface allows you to get running within days.

Affordability

While traditional hotel management software can cost hundred and thousands of dollars to deploy, train and maintain, MyCloud PMS is available without any capex or license fee and on a affordable monthly fee.

e-distribution simplified

mycloud offers integrated mobile friendly web booking engine and Channel Manager that help hotels eliminate manual, time consuming management of each site, and allows more rooms to be available for sale, at prices relative to the market without fear of duplication.

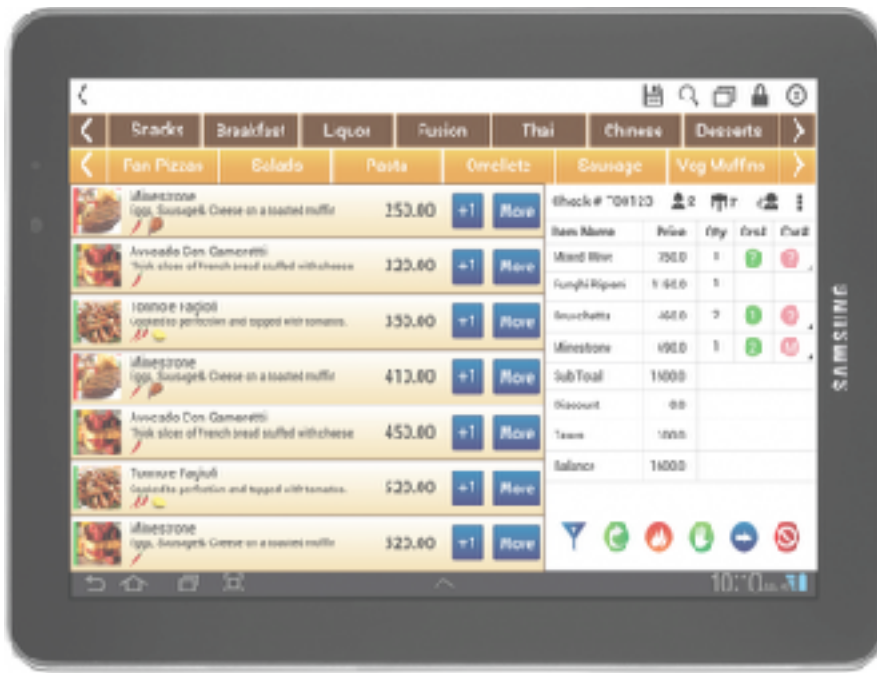

Rates, inventory and restrictions can be managed across channels from a single window. Properties of all sizes can maximize their online exposure, increase revenue and perform tedious tasks easily and efficiently.

Talk to your guests

mycloud is integrated with TripAdvisor to allow hotel owners to listen to their guests and gain valuable insight on their properties.

mycloud automatically pushes review requests to guests and pull all reviews into feedback dashboard, allowing operators to look at reviews, respond to reviews, identify property areas needing improvement and pinpoint ways to enhance the guest experience

Point of Sale

mycloud POS now enables hotels to invoice and accept payments for services rendered at the restaurants, bars, gift shops, health club, business centre and other sales outlets of a hotel.

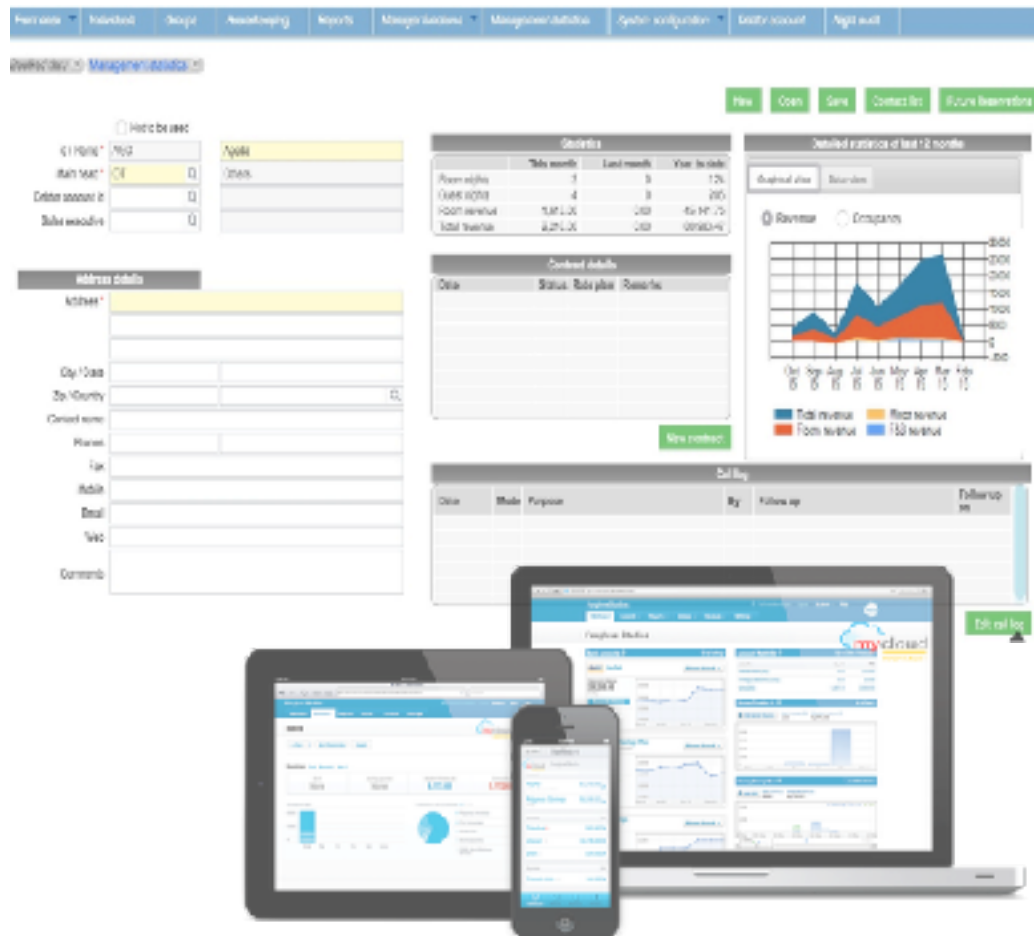

Meet our Android POS, one of the most cost-effective tablet solution that will help elevate guest interactions from ordinary to extraordinary! There is no long term contract. Just pay for the service for as long as you use.

Go mobile with your book-keeping

Running your back office has never been so easy. Use Xero Touch to manage your business while you're on the move.

Reconcile, send invoices and create expense claims – from anywhere, understand your business better, reduce admin, and save time every day.

See all your bank balances, invoices, bills and expense claims at a glance and add new transactions with a click.

Business continuity and security

Today one of the biggest fears for a hotel operator is downtime at the PMS, and when the entire system relies on the Internet, this fear hits an all time high.

While creating mycloud our primary concern has been to address this issue, we have inbuilt performance management tools and more redundant layers so availability is much higher that help hotels to get access to critical MIS information related to reservations, check-ins, checkouts and night

audit reports if their internet goes down.

SLA and support

Operational data is mailed to each hotel after night audit so incase of breakdown they can refer to these reports and continue with operations. We have also setup another mirror site for subscribed hotels to access last minute reports in case of server crash.

Another big worry is ownership of data on cloud, mycloud allows Hotels to download their complete data backups in readable format whenever they want, system also comes with SLA (Service level agreement) for disaster recovery and business continuity, with mycloud we have invested a lot into ensuring our solutions are secure, infact even more secure than a hotel operator could.
